### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
2. Authorization for this examiner's amendment was given in a telephone interview with Chris Eisenschenk on 1/12/2009.

The Specification has been amended as follows:

The following headings have been inserted into the Specification in the positions described below:

Field of the Invention; placed prior to the first paragraph on page 1 (line 2).

Background of Invention; placed prior to second paragraph on page 1 (line 6).

Brief Summary of the Invention; placed prior to third paragraph on page 2 (line 18).

Brief Description of the Drawings; placed prior to Figure descriptions on page 6 (line 8).

Detailed Description of the Invention; placed after Figure descriptions on page 7 (line 12).

Claims; placed after the last paragraph on page 13 (line 28) and prior to the claims.

The claims have been amended as follows:

Claim 1 has been amended to now read:

1. A pump system for the pumping of a liquid, having a pump module comprising:

a stator housing with a chamber,  
a rotor rotatably and axially slidably received in the chamber and ~~having~~  
comprising a first axial extension ~~having comprising~~ a liquid supply channel and a  
second axial extension comprising a liquid supply channel, the first and second axial  
extensions having different diameters, and  
first and second sealing rings, mounted around the first and second axial  
~~extensions.~~ extensions.  
said liquid supply channel of each axial extension in conjunction with the  
corresponding sealing ring forming a valve that opens and closes as a function of the  
angular and axial displacement of the rotor.

Claim 9 has been amended to now read:

9. The pump system according to claim 1, further comprising a reservoir ~~40~~ containing a  
supply of liquid, the pump module being assembled to the reservoir and having  
an inlet in liquid communication with the reservoir.

***Allowable Subject Matter***

3. Claims 1-17 are allowed.
4. The following is an examiner's statement of reasons for allowance: the prior art  
does not teach or disclose a rotor rotatably and axially slidably received in a chamber  
and comprising a first axial extension comprising a liquid supply channel and a second  
axial extension comprising a liquid supply channel, the first and second axial extensions  
having different diameters, and first and second sealing rings, mounted around the first

and second axial extensions, said liquid supply channel of each axial extension in conjunction with the corresponding sealing ring forming a valve that opens and closes as a function of the angular and axial displacement of the rotor.

5. It is noted by the examiner, and stated here for the record of prosecution, that the aspect of the instant invention determined to be novel and patentably distinct from the prior art is the axial extensions comprising liquid supply channels that act as valves when combined with the sealing rings. This limitation in combination with the rotor being both angularly and axially displaced in order to pump the fluid makes the claim read over the prior art.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to PETER J. BERTHEAUD whose telephone number is (571)272-3476. The examiner can normally be reached on M-F 9am - 5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Devon Kramer can be reached on (571) 272-7118. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
